Hello Antoine

Thanks for your enquiry.

Majestic classify all internet properties in the following way:

- aerolurcy.fr is classed as the root domain
- www.aerolurcy.fr is classed as a sub-domain of the root domain
- <https://www.aerolurcy.fr/> is classed as a single url/page on the root domain. Sometimes this will also be known as the 'Home Page'.

All Flow Metrics are calculated at the url/page level and are then averaged to get the scores for the sub-domain that they are part of. The score for the root domain is calculated from the average of all the pages/urls that are part of the root domain.

#	Item	Trust Flow	Citation Flow	recreation	Referring URLs (EDU / GOV)	Referring domains (EDU / GOV)	IP Addresses, Class C subnets
1	aerolurcy.fr Root domain, Found	12	9	12	36 EDU - GOV -	11 EDU - GOV -	11 11
2	www.aerolurcy.fr Subdomain, Found	20	17	20	31 EDU - GOV -	9 EDU - GOV -	9 9
3	https://www.aerolurcy.fr/ URL, Found	0	14		1 EDU - GOV -	1 EDU - GOV -	1 1

Summary: 1 root domains, 1 subdomains and 1 URLs (0 with estimated counts).

Export Data

As Flow Metric scores depend on the quality and quantity of backlinks, and you can see that <https://www.aerolurcy.fr/> only has one Referring Url/Backlink compared to 31 for the sub-domain as a whole and 36 for the root domain, it is not entirely surprising that it has a Trust Flow of 0 and a Citation Flow of 14.

Your biggest problem however, is the fact that we are currently unable to crawl any of the http urls that are part of the aerolurcy.fr domain:

HTTP 403 Forbidden

'HTTP 403 Forbidden' means we cannot crawl the urls and therefore are unable to follow any redirects to https versions of any urls you may have put in place. After testing, I have determined that there is a security protocol on your server specifically blocking our crawler, MJ12Bot, from crawling your domain. We are unable to even read your robots.txt file.

GET aerolurcy.fr/robots.txt Send 403 Forbidden 166 ms 146 B Just Now

< HTTP/2 403
< server: nginx
< date: Fri, 03 Feb 2023 12:13:33 GMT
< content-type: text/html
< content-length: 146

Until the protocols are removed we will not be able to crawl your domain and calculate the true Flow Metrics for it.

I hope this helps.

Kind regards

Philip

Feb 3, 2023, 11:12 GMT

I have a wordpress site which is in https, however the backlinks which point towards my site are in http and the redirection by clicking on the links is done well.

However, I don't see these backlinks appearing on Majestic in search by URL, they only appear on the root domain so my url doesn't have the power of the root domain.

So I would like to know how I could get all the power from the root domain to my url

My site is <https://www.aerolurcy.fr/> it has 0 in trust flow and 14 in citation flow when I search via the URL and when I search via the domain root www.aerolurcy.fr it has 20 of trust flow and 17 of citation flow
